

## Math Word Problems: Addition

Answer the question and show your work.

Example:

You have two candy bars. Your friend John gives you two more candy bars. How many candy bars do you have now?

$$2+2 = 4$$

Answer: 4

1) You pour two gallons of water into a bucket. Your mom then pours one gallon of water into the bucket. How many gallons of water are now in the bucket?

2) You have five dollars in your wallet. You earn five dollars raking leaves and put the money in your wallet. How much money do have now?

3) You are building a tower with blocks. On Monday, you make a tower 10 blocks high. On Tuesday, you add 10 more blocks to the tower. How high is the tower now?
